Managing Gunicorn: Kill and Restart Guide

1. Check if Gunicorn is running:
   ps aux | grep gunicorn

2. Kill all running Gunicorn processes:
   pkill -f gunicorn

   (Alternative method)
   kill -9 <PID>

3. Restart Gunicorn manually:
   gunicorn -w 4 -b 0.0.0.0:5050 app:app   --access-logfile gunicorn_access.log   --error-logfile gunico

4. Verify Gunicorn is running:
   ps aux | grep gunicorn

5. (Optional) If you want Gunicorn to start automatically,
   consider creating a systemd service file for better process management.
